

GROUTING INSTRUCTIONS

- Watch the video tutorial @ www.beachlifemosaics.com/how-to-grout
- You can upload finished projects to beachlifemosaics@gmail.com with a solid colored background.

STEP 1

Slowly add $\frac{1}{4}$ cup of water to your bag of grout and mix. Then add 1 tablespoon of water at a time until you get a consistency of peanut butter or pan cake batter (it should be no more than 2 tablespoons).

STEP 2

Cut a bottom corner of the bag. Pipe the grout onto your project covering the entire surface. Be sure to get into all the cracks and the edges. If the grout becomes too thick simply spray it with light mist of water.

STEP 3

Wipe off any excess grout with a paper towel. You should see a haze begin to form on the surface of the tiles. Let the grout dry for about 10 – 20 minutes.

STEP 4

Clean the haze on the tiles off by using a damp paper towel or damp sponge. Let the grout dry again for 10 – 20 minutes. You should see the haze begin to form again. Repeat this cleaning and drying process until the haze no longer forms. Apply the sealer to your project 72 hours after the grout has dried using a foam brush or sponge. **DO NOT** put your project in direct contact with the weather. It will warp. A covered patio may be more suitable.
